

## Patient Registry SIG

*Classification, Strategy & Design Working Group*

Chair: Chris L. Pashos PhD  
Vice President and Executive Director, HERQuLES  
Abt Bio-Pharma Solutions, Inc.

## Classification, Strategy & Design Working Group

**Goals:**

- determine and define the most appropriate language for patient registry standardization, a patient registry terminology (common language), universal patient registry characteristics and a globally harmonized patient registry classification system.
- to establish good research practices related to choices of registry strategy and consequent design.

## ISPOR Taxonomy of Patient Registries

- Each term will include a brief definition, a broader explanation, the associated values & uses, and conclude with a discussion of issues or conflicts related to the term.
- The issues/conflicts will be the basis of the Working Group's Good Research Practices papers.

## Classification, Strategy & Design Working Group

**Establishment of 4 Project Teams:**

- Characteristics & Classifications of Patient Registries
- Design, Development & Implementation
- Analysis
- Reporting & Publishing

## The Taxonomy Teams' Methodology

**Identification of terms: hand-searched existing sources for terms:**

- Berger et al, ISPOR Book of Terms (2003)
- AHRQ, Registries for Evaluating Patient Outcomes: A User's Guide (2007)
- CONSORT, ICJME, selected journal requirements for authors

## Patient Registry SIG

*Classification, Strategy & Design Working Group*

**Team 1: Characteristics & Classifications**

Co-Chair: Dimitris Polygenis PharmD  
Co-Chair: Sally Thompson PhD, MSc

### Characteristics & Classification Members

- **Co-chair: Sally Thompson PhD, MSc**  
Director, Outcomes Research, Pfizer, Inc
- **Co-chair: Dimitris Polygenis PharmD**  
Vice President, McKesson Specialty  
McKesson Corporation
- **Grace Leung MPH**  
Health Economist, Genentech
- **Neal Mantick**  
Director, Registries, Abt Bio-Pharma Solutions, Inc.

### Achievements

- Developed working definition
- Identified common elements and considerations
- Agreement as to what is NOT a registry
- Identified commonly used registry designs and applications
- Set the stage for further discussion/clarification (to follow in subsequent sections)

### Registry Definition

- Prospective observational study of subjects, **with certain shared characteristics**, that collects ongoing and supporting data over time on well-defined outcomes of interest for analysis and reporting

### Essential Characteristics of a Registry

Characteristics	Considerations
Observational	<ul style="list-style-type: none"> <li>• Real world assessment</li> </ul>
Non-interventional	<ul style="list-style-type: none"> <li>• No protocol-defined treatment/management, allocation of patients and patient visits</li> <li>• Limited risk; ethics review/consent required however focus is on protection of personal health information</li> </ul>
Data Collection	<ul style="list-style-type: none"> <li>• Dictated by patient and patient experience (i.e., heterogeneous and missing data)</li> <li>• Need to define key assessments and outcomes of interest</li> </ul>
Outcomes Evaluation	<ul style="list-style-type: none"> <li>• Baseline assessment critical</li> <li>• Longer-term observation period</li> <li>• Hypothesis generating versus hypothesis testing</li> </ul>

### Key Differences versus other Study Designs I

	Characteristic	Registry versus Traditional RCT
1	Treatment	Evaluate care in real-world setting
2	Time period/Duration	Long-term outcomes collected
3	Patients	Can involve large numbers of patients; 'typical' patients seen in real-world setting Limited inclusion/exclusion criteria
4	Methods	Do not require comparator/placebo; 'typical' care Open-label; no defined/mandated interventions or data collection No random allocation of patients

### Key Differences versus Other Study Designs II

	Characteristic	Registry versus Traditional RCT
5	Statistical Analysis and Data Collection	Hypothesis generating; no sample size calculation; focus on 'generalizability' Heterogeneous patients
6	Patient Consent & Ethics Review	Focus on handling of personal health information and not risk
7	Safety	Voluntary reporting of adverse events Unsolicited (vs. solicited) adverse event collection

### Registry Classification I

Registry Type Sponsors	Design	Measurement	Application/Use
<b>Simple Cohort</b> Epidemiologists Public Health Clinicians	<ul style="list-style-type: none"> <li>Prospective</li> <li>Non-interventional</li> <li>Sample-based</li> <li>Collection of information in population that share common exposure (i.e., pregnancy registry)</li> </ul>	<ul style="list-style-type: none"> <li>Clinical outcomes i.e., morbidity, mortality</li> </ul>	<ul style="list-style-type: none"> <li>Pregnancy registry</li> <li>Determine association/correlation between exposure and outcome</li> </ul>
<b>Outcomes</b> Epidemiologists Policy makers Governments Public Health Academia	<ul style="list-style-type: none"> <li>Prospective</li> <li>Non-interventional</li> <li>Population-based</li> <li>Collection of information in population</li> </ul>	<ul style="list-style-type: none"> <li>Clinical outcomes i.e., morbidity, mortality</li> </ul>	<ul style="list-style-type: none"> <li>Understand natural history of patient cohort that share common characteristic i.e., social science research, population-based research, epidemiological research</li> <li>Examples: mortality, literacy, access to medical services</li> </ul>
<b>Safety Surveillance</b> Manufacturers Regulators Clinicians	<ul style="list-style-type: none"> <li>Prospective</li> <li>Non-interventional</li> <li>Sample-based</li> <li>Collection of information in patients receiving common intervention</li> </ul>	<ul style="list-style-type: none"> <li>Adverse events</li> <li>Unexpected adverse events</li> <li>Serious adverse events</li> </ul>	<ul style="list-style-type: none"> <li>Support product registration</li> <li>Conduct post-marketing surveillance ('real world setting')</li> <li>Identify 'signals'</li> </ul>

### Registry Classification II

Registry Type Sponsors	Design	Measurement	Application/Use
<b>Risk Management</b> Regulators Manufacturers	<ul style="list-style-type: none"> <li>Prospective</li> <li>Interventional</li> <li>Population-based</li> <li>Use one or more tools to meet goal(s)</li> <li>May collect info beyond FDA-approved labeling</li> </ul>	<ul style="list-style-type: none"> <li>Clinical outcomes as compared to clinical studies</li> <li>Safety information and adverse events compared to clinical studies</li> <li>Compliance with prescribed management and prescribing protocols</li> <li>Impact of tools on ensuring compliance an outcomes</li> </ul>	<ul style="list-style-type: none"> <li>Mandated by regulators to meet specific goals and objectives in minimizing known risks while preserving benefits</li> <li>Assessing products risk-benefit balance</li> <li>Developing and evaluating tools to minimize risks while preserving benefits</li> <li>Making adjustments to risk management tools to further improve risk-benefit balance</li> </ul>
<b>Disease</b> Regulators Manufacturers	<ul style="list-style-type: none"> <li>Prospective</li> <li>Non-interventional</li> <li>Population-based</li> <li>Collects information in cohort of patients with common disease</li> </ul>	<ul style="list-style-type: none"> <li>Drug utilization and safety</li> <li>Outcomes – morbidity and mortality</li> <li>Resource utilization</li> <li>Clinical management</li> </ul>	<ul style="list-style-type: none"> <li>Understand natural history of disease</li> <li>Identify, compare and evaluate management patterns</li> <li>Identify 'signals' relating to safety, effectiveness and outcomes</li> <li>Quantify burden of illness, QoL</li> <li>May be iterative in establishing and benchmarking best practices</li> <li>Assess screening, identification and monitoring practices</li> <li>Cost-effectiveness</li> </ul>

### Registry Classification III

Registry Type Sponsors	Design	Measurement	Application/Use
<b>Drug and Drug Class</b> Clinicians Manufacturers Regulators Payers	<ul style="list-style-type: none"> <li>Prospective (some retrospective)</li> <li>Sample-based</li> <li>Collects information on patient cohort receiving common treatment</li> </ul>	<ul style="list-style-type: none"> <li>Safety and effectiveness</li> <li>Outcomes – morbidity and mortality</li> <li>Resource utilization</li> <li>Clinical management and add-on therapy</li> </ul>	<ul style="list-style-type: none"> <li>Post-marketing surveillance</li> <li>Compare effectiveness to efficacy</li> <li>Study non-approved uses</li> <li>Identify drug-related 'signals'</li> <li>Cost effectiveness</li> <li>Willingness to pay</li> <li>Reimbursement evaluation</li> </ul>
<b>Management</b> Payers Clinicians Health policy makers Health administrators Academia	<ul style="list-style-type: none"> <li>Prospective/retrospective</li> <li>Collect information on common population</li> <li>Population/sample-based</li> </ul>	<ul style="list-style-type: none"> <li>Treatment and management patterns</li> <li>Resource utilization</li> <li>Outcomes</li> </ul>	<ul style="list-style-type: none"> <li>Care mapping</li> <li>Continuous quality improvement</li> <li>Resource utilization and costing</li> <li>Burden of illness</li> <li>Quality of care</li> <li>Provider performance</li> <li>Health economic evaluation</li> <li>Reimbursement evaluation</li> </ul>
<b>Resource Utilization</b> Payers Policy makers Clinicians Health administrators	<ul style="list-style-type: none"> <li>Prospective or retrospective</li> <li>Sample-based</li> </ul>	<ul style="list-style-type: none"> <li>Direct costs i.e., medical care, drug use, hospitalization</li> <li>Productivity costs i.e., absenteeism, productivity</li> </ul>	<ul style="list-style-type: none"> <li>Burden of illness</li> <li>Cost of care</li> <li>Reimbursement evaluation</li> <li>Health economic evaluations</li> </ul>

## Patient Registry SIG

### Classification, Strategy & Design Working Group

**Team 2: Design, Development & Implementation**

Chair: **Eric Gemmen, MA**  
 Senior Director, Medical Affairs, Epidemiology & Outcomes Research, Quintiles Late Phase & Safety Services

- ### Design, Development & Implementation Members
- **Murtuza Bharmal PhD**  
Associate Director, Quintiles Late Phase & Safety Services
  - **Maznah Dahlui MD, MPH**  
Department of Social and Preventive Medicine, University of Malaya
  - **Nancy Dreyer PhD, MPH**  
Outcome
  - **Donatus Ekwueme PhD**  
Senior Health Economist, U.S. Centers for Disease Control & Prevention (CDC)
  - **Claudio Faria, PharmD MPH**  
Associate Director of Clinical Research, UMass Medical School
  - **Huan Huang PhD, MS**  
Senior Analyst, Boston Health Economics
  - **Joanna Lis PhD, MBA**  
Manager of Health Economics Department, sanofi-aventis, Warsaw, Poland
  - **Yvonne Lis PhD**  
Director, Carter-Lis Associates Limited
  - **Anuprita D Patkar, PhD**  
Associate Director, Health Economics & Reimbursement, ETHICON
  - **Gabriel Sandblom MD, PhD**  
Department of Surgery, University Hospital, Lund, Sweden
  - **Kathryn Starzyck MSc**  
Associate Director of Scientific Affairs, Outcome

- ### Achievements
- #### Identified 25 categories of terms
- 9 in Development section including:  
registry purpose, funding and oversight, stakeholders, scope, ethics and privacy, regulatory considerations, etc.
  - 11 in Design including:  
research question(s), design characteristics, study population, data elements, data sources, data collection materials & methods, guidelines & standards, registry size and duration, etc.
  - 5 in Implementation including:  
pre-launch issues, site support, data capture & management, data lock, close-out

### Achievements

**160+ terms /definitions completed**

76 terms in Development section including:  
 exposure, feasibility, informed consent, IRB/ethics approval, target population, etc.

50 terms in Design including:  
 observational, non-interventional, naturalistic, active/passive surveillance, historical control, etc.

37 terms in Implementation including:  
 site identification, regulatory documents, ICF-GCP, database build, clinical research associate, query resolution, loss to follow-up, source document verification (SDV), site close-out, etc.

### Challenges

- The terms 'registry' and 'observational study' are often used interchangeably, although registries are a *subset of observational studies*. Moreover, the term 'observational' may differ in meaning between Europe and the US
  - European definition more strict
- Scope - keeping the terms specific to registries and not simply clinical studies, overall

### Example: Patient Recruitment

#### Patient Recruitment

- **Brief Definition:** The process of enrolling patients into the registry.
- **Explanation:** Registry participants are recruited on a disease basis or exposure/treatment basis
  - Only after treatment/prescribing decision has been made by treating physician
- **Issues:**
  - Can the existence of a product registry impact the physician's treatment/prescribing decision?
  - Is the enrolled sample representative of the target population?
  - Are enrollment caps/limits at given sites appropriate?

### Achievements & Next Steps

**2009 ISPOR 14<sup>th</sup> Annual International Meeting in Orlando Workshop Presentation**

W12: A TAXONOMY FOR THE DESIGN, DEVELOPMENT AND IMPLEMENTATION OF PATIENT REGISTRIES

Available on the ISPOR website via the *Research Digest* or on the *Patient Registry Classification, Strategy & Design Working Group webpage*

**Draft an article based on our findings and submit to ISPOR CONNECTIONS for September/October 2009 issue.**

### Patient Registry SIG

#### Classification, Strategy & Design Working Group

Team 3: Analysis

Co-Chair: Shital Kamble MS  
 Co-Chair: Chris Blanchette PhD

### Team 3: Analysis Members

- **Co-Chair: Shital Kamble MS**  
 PhD Candidate, Health Services Research, University of North Carolina at Charlotte
- **Co-Chair: Christopher Blanchette PhD**  
 Director, Center for Pharmacoeconomic and Outcomes Research  
 Lovelace Respiratory Research Institute
- **Maznah Dahlui MD, MPH**  
 Lecturer, Department of Social and Preventive Medicine  
 University of Malaya
- **Donatus Ekwueme PhD**  
 Senior Health Economist, US Centers for Disease Control and Prevention
- **Alex Exuzides PhD**  
 Director, ICON Clinical Research
- **Eric Gemmen MA**  
 Senior Director, Medical Affairs, Epidemiology & Outcomes Research,  
 Quintiles Late Phase & Safety Services
- **Carl Gibbons BSc**  
 Research Analyst, Schering-Plough Ltd
- **Joanna Lis PhD MSc**  
 Health Economics Manager, Sanofi-Aventis
- **Anupriya Patkar PhD**  
 Associate Director, Health Economics & Reimbursement, ETHICON, J&J
- **Matt Reaney MSc**  
 Health Outcomes Scientist, Endocrine, EuOR, Lilly UK

### Achievements

**Identified 13 broad categories of terms**

- Power/Sample Size Calculations
- Statistical Inference and Hypothesis Testing
- Main Analysis Techniques
- Treatment of Selection Bias
- Treatment of Missing Observations
- Multiplicity Adjustments
- Systematic Reviews/ Meta-Analysis

### Achievements

**70 analysis terms definitions completed**

- Charlson Comorbidity Index, Elixhauser Comorbid Disease Adjustment Method, etc.
- Regression- Ordinal Logit/Probit Models, Cox Proportional Hazards Models, Two-part Models, Multilevel Models, etc.
- Propensity Score Methods, Instrumental Variables
- Clinical Significance, Statistical Significance, etc.
- Missing Completely at Random (MCAR), Missing at Random (MAR), etc.

### Achievements

**2008 ISPOR 11<sup>th</sup> European Congress in Athens Workshop**

W20: Use of Real World Data: Challenges in the Use of Patient Registry Data

Available on the ISPOR website via the *Research Digest* or on the *Patient Registry Classification, Strategy & Design Working Group webpage*

### Example: Multiplicity Adjustments

**Brief Definition:** The process of adjusting for multiple statistical tests to correct for occurrence of false positives (i.e., Type I Error) that could emerge from investigators looking at many additional endpoints and treatment group comparisons.

**Explanation:** different methods of correcting for multiple testing procedures in clinical trials or observational studies

- Bonferroni method,
- Hochberg false discovery rate (FDR) method,
- Holm correction method,
- Westfall and Young Permutation (Hierarchical Testing),
- Bootstrap method

### Example: Multiplicity Adjustments

**Issues:**

- Is multiplicity adjustment necessary?
  - currently a trend to discount the multiplicity problem and its effects
- very few studies have described specific conditions that demand the use of multiplicity adjustment as a control measure

### Patient Registry SIG

*Classification, Strategy & Design Working Group*

Team 4: Reporting & Publishing

Co-Chair: Kirsten Hall Long PhD  
Co-Chair: Diana Frame

### Reporting & Publishing Members

**Co-Chair: Kirsten Hall Long PhD**  
Senior Health Economist, Division of Health Care Policy & Research,  
College of Medicine, Mayo Clinic

**Co-Chair: Diana Frame**  
Independent Consultant, Frame Research LLC

**John Ellison**  
Senior Manager, Scientific Publications, Clinical Research Department,  
LifeScan, Inc.

**Huan Huang PhD, MS**  
Senior Analyst, Boston Health Economics

**Siva Narayanan MS, MHS**  
Vice President and Practice Leader, Treatment Performance Optimization  
– Global Portfolio, TNS Healthcare

### Achievements

**Identified 3 broad categories of terms**

- Validity & Quality
- Ethical Considerations
- Public Reporting of Registry Data

### Achievements

**26 Reporting & Publishing terms defined**  
Including....

- Internal and external validity
- Bias (selection, response, recall, attrition)
- Quality domains
- IRB / Ethics Committee (reporting considerations)
- Registry funding
- Authorship
- Publication bias
- Transparency

### Achievements

**26 Reporting & Publishing terms**

- Full draft of all terms completed
- Brief Definition, Explanation, Value and Use, Issues, and Bibliography sections for each term
- Beginning to identify cross-indexing with other sections
- Looking ahead to Best Practices work ("preview" of this especially in Issues sections)

### Reporting and Publishing Example

**Transparency**

- **Brief Definition:** A characteristic of the report defined by the presence and clarity of key information on the rationale, methodology, and support (including funding) used to collect, analyze, and publish registry data.
- **Explanation:** Transparency in reporting facilitates interpretation of the study by other researchers as well as health care decision-makers, and may lead to faster adoption of results.

### Reporting and Publishing Example

**Transparency**

- **Issues:** Observational studies have received less attention than clinical trials in the quest for complete and timely reporting of study results. Postmarketing and registry studies play an important role in evidence development, however, and efforts to increase transparency should encompass these observational studies as well. Given limitations on manuscript length in print journals and the frequent complexity of study design and analytic models in observational research, some authors have called for availability of the detailed protocol, coding definitions, and other methodologic detail on the journal's or researcher's web site.

## Patient Registries SIG

### Analysis & Data Management Working Group

Chair: Leanne Larson MHA  
Vice President, Sg2 Healthcare Intelligence

## Analysis & Data Management Working Group

### Establishment of 3 Project Teams:

- Cost-effectiveness Analysis of Patient Registry Data Team
- Analysis of Effectiveness in Registry Data Team
- Reporting Results from Registry Data for Publications Team

Co-Chair: Mia Malmenäs MSc, *Shire HGT*  
Co-Chair: Mike Novotny MBA, MA, *Medrio*

## Analysis & Data Management Members

- Lusine Abrahamyan MD, MPH, *University of Toronto*
- Marg Hux, MSc, *i3 Innovus*
- Michelle Pritchard Turner MS, *ICON Lifecycle Sciences*
- Rebecca Gruhlkey MBA, *Thomson Healthcare*
- Isabelle Morin MSc, *Shire HGT*
- Nancy Dreyer PhD, MPH, *Outcome*
- Claudio Faria PharmD, MPH, *University of Massachusetts*
- Nandan Kenkeremath JD, BS, *Leading Edge Policy & Strategy*
- Peggy Schrammel, *University of British Columbia*
- Steven Takemoto PhD, *University of California*
- Fang Wang MD, PhD, *GlaxoSmithKline*
- Jaro Wex PhD, MD, BA, *Pharmarchitecture Limited*

## Analysis Issues for Patient Registries

### Our Focus – guidance & recommendations for analysis within registries:

- Cost-effectiveness
- Effectiveness
- Reporting of registry data for publication

## Analysis Issues for Registries

- Existing guidelines lack practical analysis guidance
  - AHRQ Registry guidelines
  - GRACE initiative
- Analysis issues differ by registry GOALS:
  - Natural history of disease
  - Treatment practice and effectiveness
  - Burden of illness and cost-effectiveness of treatments
  - Monitor treatment safety / harm
  - Quality of care

## Analysis of Registries

- Registries well suited to collect 'real-world' data
- Incremental Effectiveness – issues identified
- Disease-related cost over fixed time frame
  - Identify relevant resources to include in cost
  - Treatments, administration, safety and effectiveness
    - e.g. management of adverse events, long term complications of progressing disease

### Good Research Practices for Cost Effectiveness Analysis of Patient Registry Data

Provide recommendations on:

- Dealing with missing data
  - Variable Follow-up - balance long timeframe with need to impute
  - Missing assessments, incomplete information
- Dealing with potential bias – effect on cost
  - Selection bias, ascertainment and measurement bias
- Cultural and country differences

### Good Research Practices for Analysis of Effectiveness in Registry Data

Provide recommendations on suitable statistical approaches to registry data with a particular focus on estimating the effectiveness of treatment methods:

- covariate adjustments
- matching
- propensity scoring
- missing data handling
- etc

### Good Research Practices for Reporting Results from Registry Data for Publications

Develop recommendations for reporting results from registry data for publications and evaluate the STROBE guideline for its appropriateness for patient registries

- Develop a checklist for best practices
- A point by point list analyzing the STROBE guideline for relevance to registries

### Achievements

2009 ISPOR 14<sup>th</sup> Annual International Meeting in Orlando Workshop Presentation

W9: ANALYSIS OF EFFECTIVENESS AND COST-EFFECTIVENESS IN PATIENT REGISTRIES

Available on the ISPOR website via the *Research Digest* or on the *Patient Registry Analysis Working Group webpage*

### Achievements
