About the Artist: Born in Munich in April 1980, and diagnosed with SMA type 2 in early childhood, today Phil designs his large-format works of art on a PC, using a small joystick on his wheelchair. Thus, through only the minimal movement that he is left with, he continues to create, inspire, delight and challenge us. Phil L. Herold is an internationally recognized artist who describes himself as a "cyberspace expressionist of the 21st century".

Presented and discussed by a faculty of experts in real-world evidence
