

Jaime Caro

“Individual-patient” models should be the default approach in our field. Only in rare cases is a pure cohort approach appropriate

Bram Ramaekers

The use of standardized templates that are approved by all stakeholders should be developed and used to ensure the transparent and efficient implementation of the computerized model and accelerate the external review of individual-patient models

Paul Tappenden

Neither cohort- nor patient-level models should always be preferred in all situations - model developers should adopt the simplest approach which retains the important complexities of the decision problem...

... sometimes this will be patient-level simulation
