## NICE's Science Policy and Research Programme

Develop **cross-institute science policy**

Engage in **methods research** to help NICE respond to external change and continue to be a world-leader

**Prioritise and promote research recommendations** from NICE committees

**Engage** with external agencies and policy partners

Develop and maintain NICE's **research governance infrastructure**

We are on a journey...

2008

## NICE's Social Value Judgements

Although each type of NICE guidance is developed using a different process, all these processes follow the same procedural principles. They therefore share common features arising from these principles:

SCIENTIFIC  
RIGOUR

INCLUSIVENESS

TRANSPARENCY

INDEPENDENCE

CHALLENGE

REVIEW

SUPPORT FOR  
IMPLEMENTATION

TIMELINESS

## The NICE Principles

Sets out a number of key principles that are universal to all of our guidance and standards

Principle: “Use evidence that is relevant, reliable and robust”

NICE

Public consultation took place in 2019. Consultation comments to be reviewed by NICE Board in November 2019.

## Statement of Intent for Data and Analytics

Statement of Intent outlines:

- What kind of evidence NICE currently uses to develop guidance
- What broader types of data are available
- When and why should broader types of data be considered
- Practical considerations associated with data analytics

NICE

Public consultation closed October 2019. Publication date of final statement TBC.

# Reflections: NICE and transparency

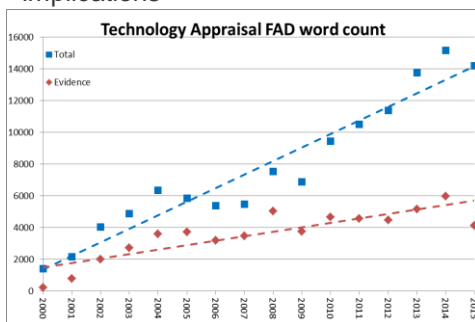

-  Desire for transparency is not new – it's in our DNA
-  The context in which we work keeps evolving
-  Data infrastructure and analytics now provide new exciting capabilities
-  Growing need to increase confidence in non-RCT data used for decision making
-  Registration of HETE studies is both feasible and desirable
-  The question is: how do we progress to implementation?

## NICE

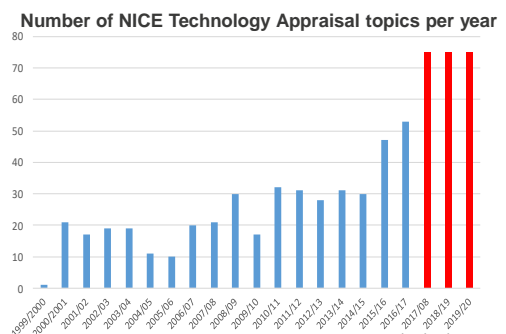

7

## The practical view: The HTA machine is under pressure

- HTAs deal with more evidence every year, but also produce more output with shorter production times
- Transparency may mean more data but this needs to be balanced against productivity
- Implementation of transparency measures should be mindful of practical implications

## Considerations for implementation

- Application not just in HTA but also in clinical guideline development
- Balance carrots vs. sticks: Offer fast track review, discounted open source publishing? Compulsory requirements by regulators, HTAs and payers?
- Lock box idea is workable – we deal with confidential information already however this should be minimized
- Requirements should result in no or minimal time delay
- Consider the minimal workable requirement (vs ideal requirements)
- Make things easier for our technical teams: easily accessible, one source, with relevant information but not an overflow of data. Need to make sure this is helpful in practice
