# CoPing COVID Cohort

---

- Cohort study evaluating Pregnancy & Family Health during the COVID-19 Pandemic
- Participants recruited through targeted social media advertisement (Facebook, Twitter)
- Eligibility criteria:
  - Adult 18 years and older
  - Resident in United States
  - Pregnant anytime since January 2020

# Research Objectives

---

- 1) Measure HRQoL among pregnant and recently pregnant persons during the COVID-19 pandemic
- 2) Compare HRQoL by maternal characteristics
- 3) Estimate the association between experiences with COVID-19 and HRQoL

# Survey Design

---

- Survey implemented in English and Spanish between May and July 2021
- Items:
  - EQ-5D-5L + EQ-VAS
  - Obstetric history & health information
  - Prenatal care
  - Delivery experience
  - Social support
  - COVID-19 experiences
  - Sociodemographic information

 The C19 Pregnancy Study  
May 16 · 

Researchers at the University of San Francisco are conducting an online survey to find out how the pandemic has impacted pregnancy health and the health of families.

You are eligible to participate if you:

- Have been pregnant at any time since January 2020
- Are 18 years or older
- Live in the USA

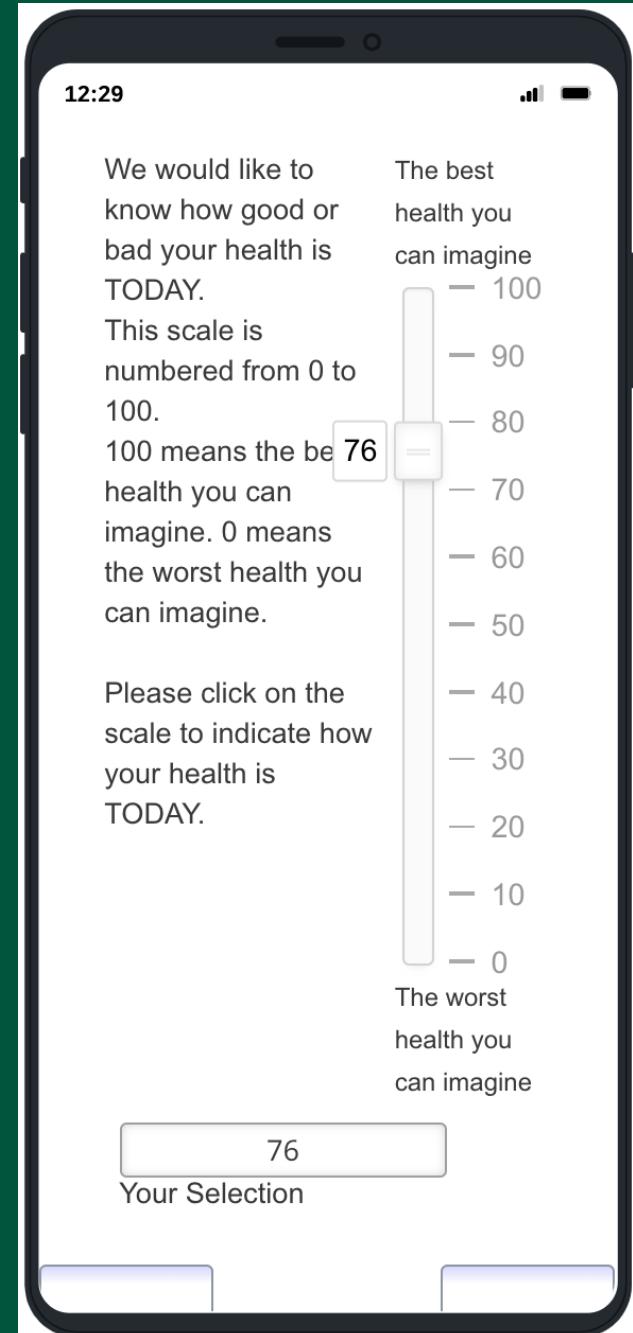

All participants will be entered into a lottery to win one of 10 Target gift cards worth \$100!!

# HRQoL: EQ-5D-5L and EQ-VAS

- 5 items describing health in terms of mobility, self-care, usual activities, pain/discomfort and anxiety/depression
- Each item has 5 response levels ranges from no problems to extreme problems
- An existing algorithm (developed by EuroQol) was used to calculate health state values (Utility values)
- EQ-VAS uses a visual analogue scale that records respondents' self-reported health status, ranging from 0 to 100
- Analysis: Median regression to estimate change in utility values and VAS score by maternal characteristics and experiences with COVID-19

3,134 participants

- 3,134 participants across all US states and 2 US territories (Puerto Rico & US Virgin Islands)
- Post-stratification weights applied to ensure representativeness by maternal age, race/ethnicity and US region

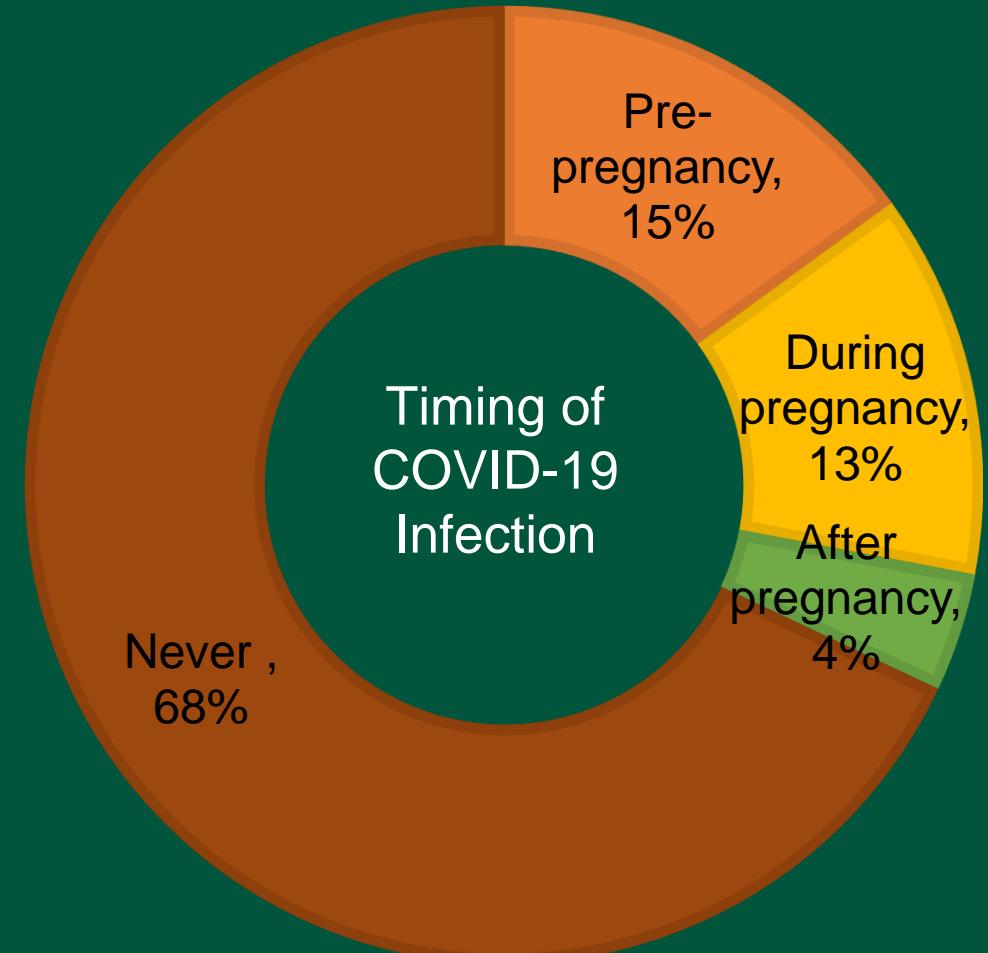

# HRQoL by Maternal Characteristics

Category	Value	N	Mean Utility	$\beta$ (95% CI)	Category	Value	N	Mean Utility	$\beta$ (95% CI)
Age	18-24y	396	0.43	<b>-0.10 (-0.19, -0.01)</b>	Employment	Employed	2,205	0.54	<b>0.13 (0.04, 0.06)</b>
	25-29y	906	0.55	0.00 (-0.03, 0.03)		Unemployed	762	0.53	<b>0.14 (0.06, 0.21)</b>
	30-34y	1,003	0.55	0.00 (-0.03, 0.03)		Homemaker/ Student	166	0.44	Reference
	35-39y	671	0.54	0.00 (-0.03, 0.03)	Asthma	Yes	314	0.39	<b>-0.25 (-0.30, -0.20)</b>
	$\geq 40y$	158	0.55	Reference		No	2,757	0.55	Reference

	Pacific Islander, American Indian or Alaskan Native	31	0.56	0.06 (-0.17, 0.29)	CHD	Yes	20	0.32	0.00 (-0.20, 0.21)
						No	3,053	0.53	Reference

# COVID-19 Experiences

---

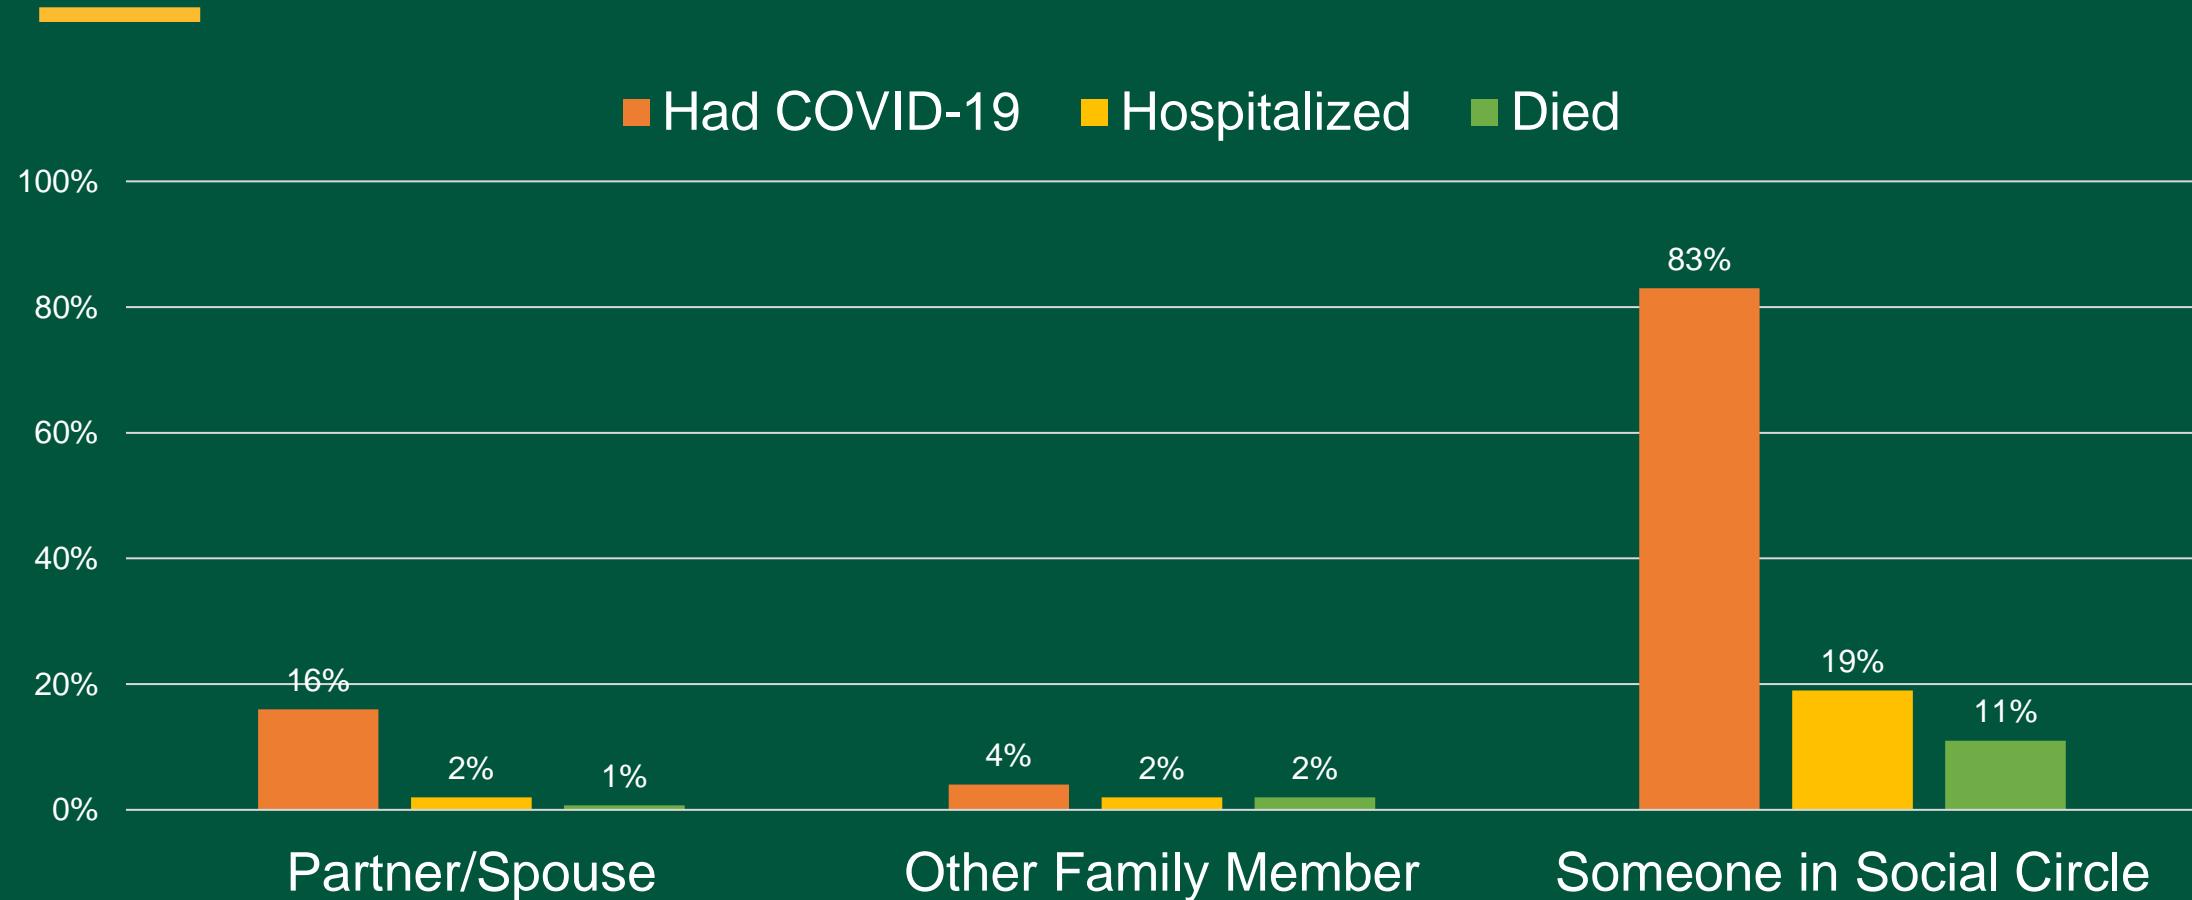

- 32% reported being diagnosed with or believing they had COVID-19 (72% diagnosed by a clinician)
- 15% infected prior to and 13% infected during pregnancy
- 2.3% were admitted to hospital

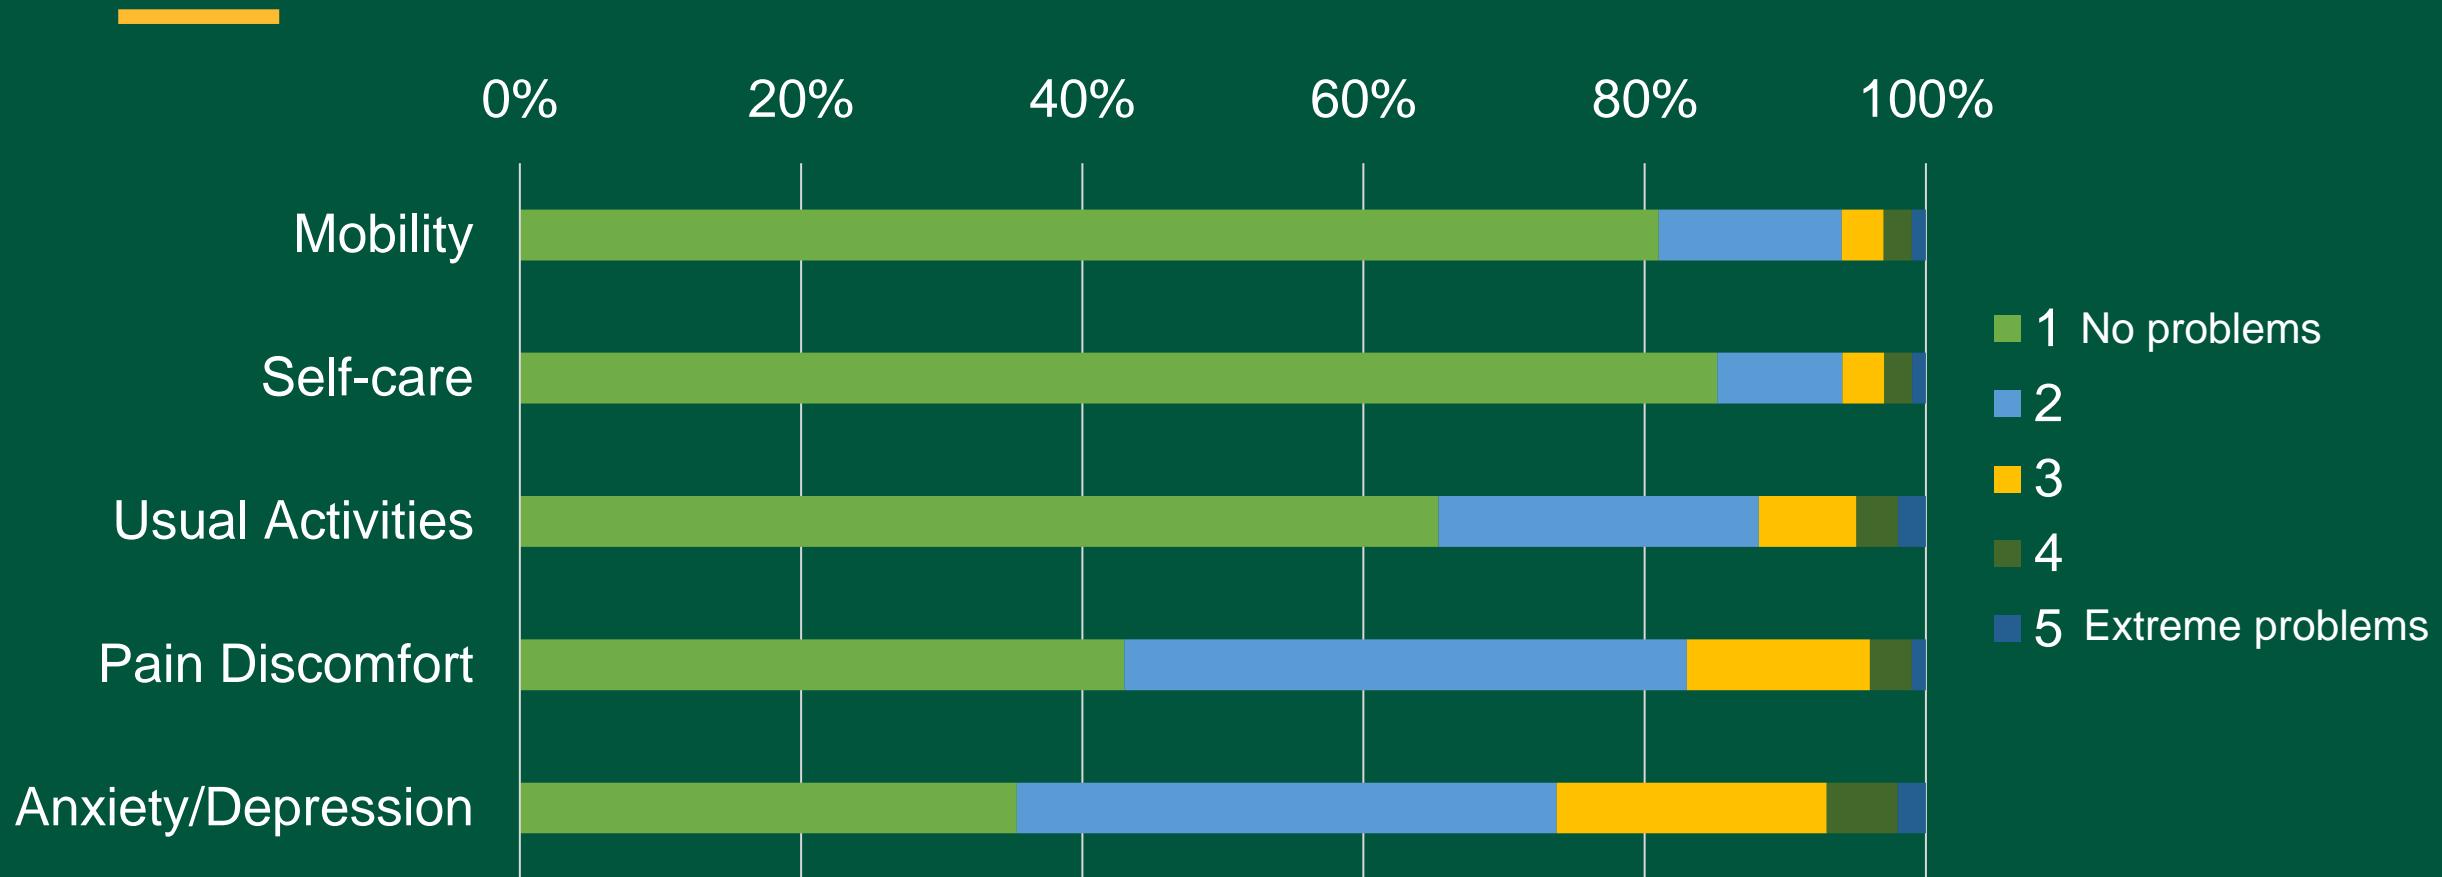

# Perceived Severity of COVID-19

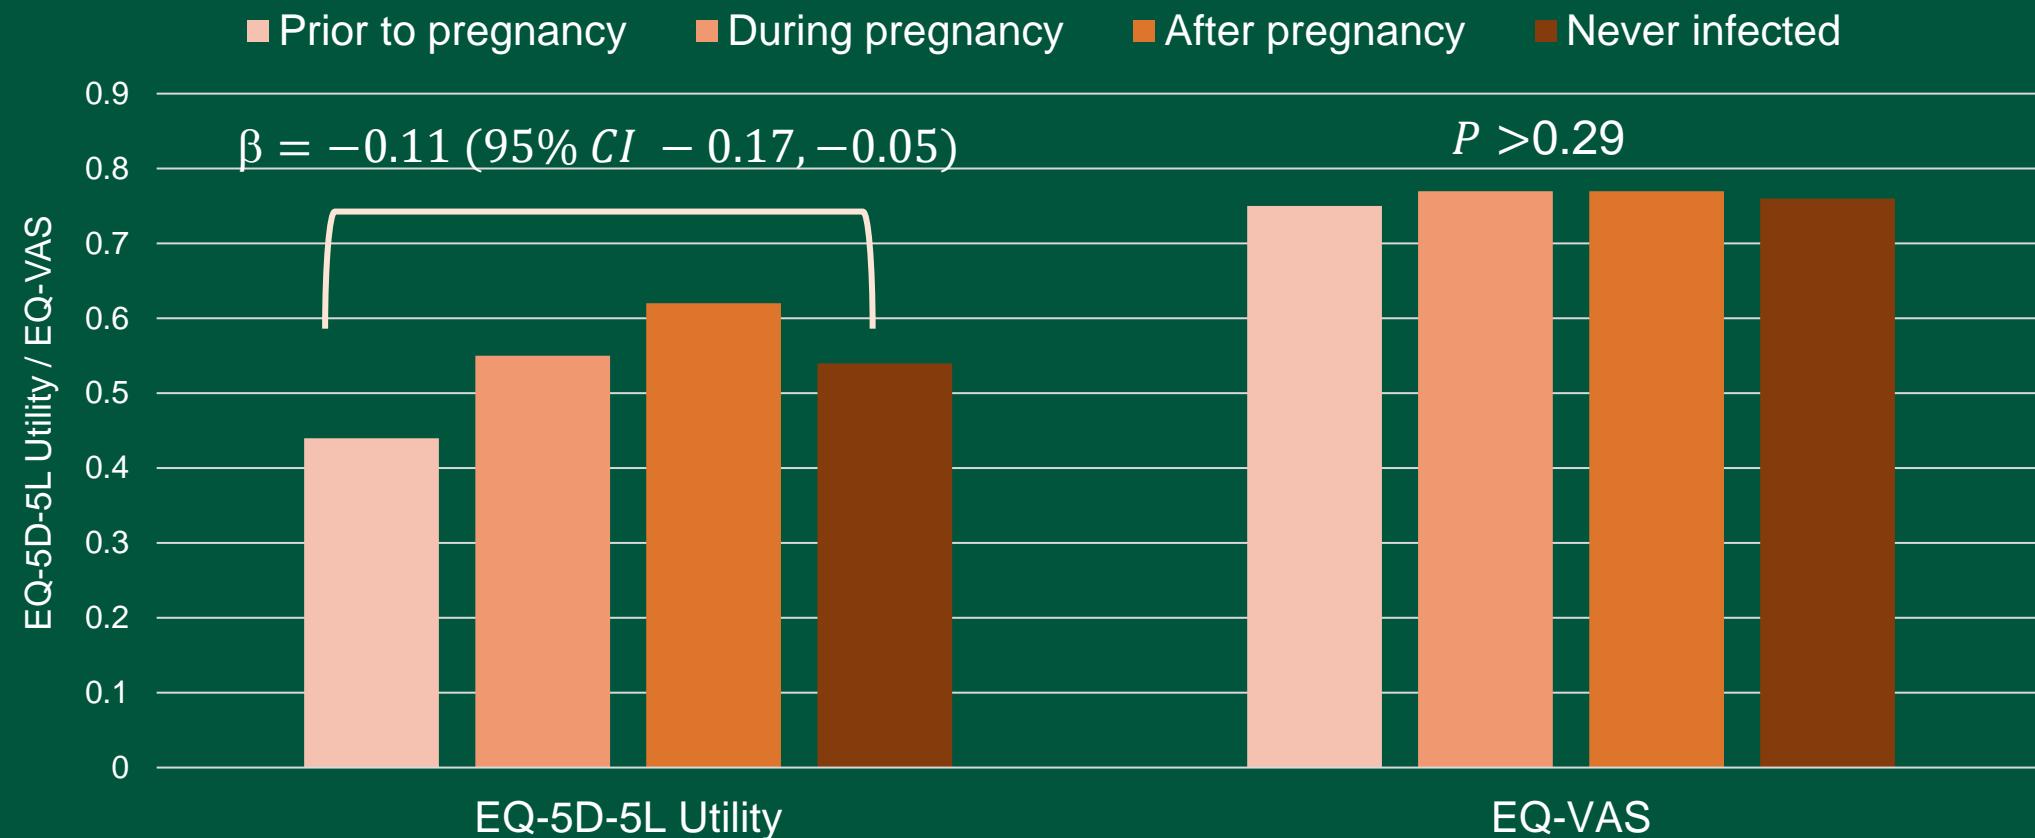

# Other COVID-19 Experiences

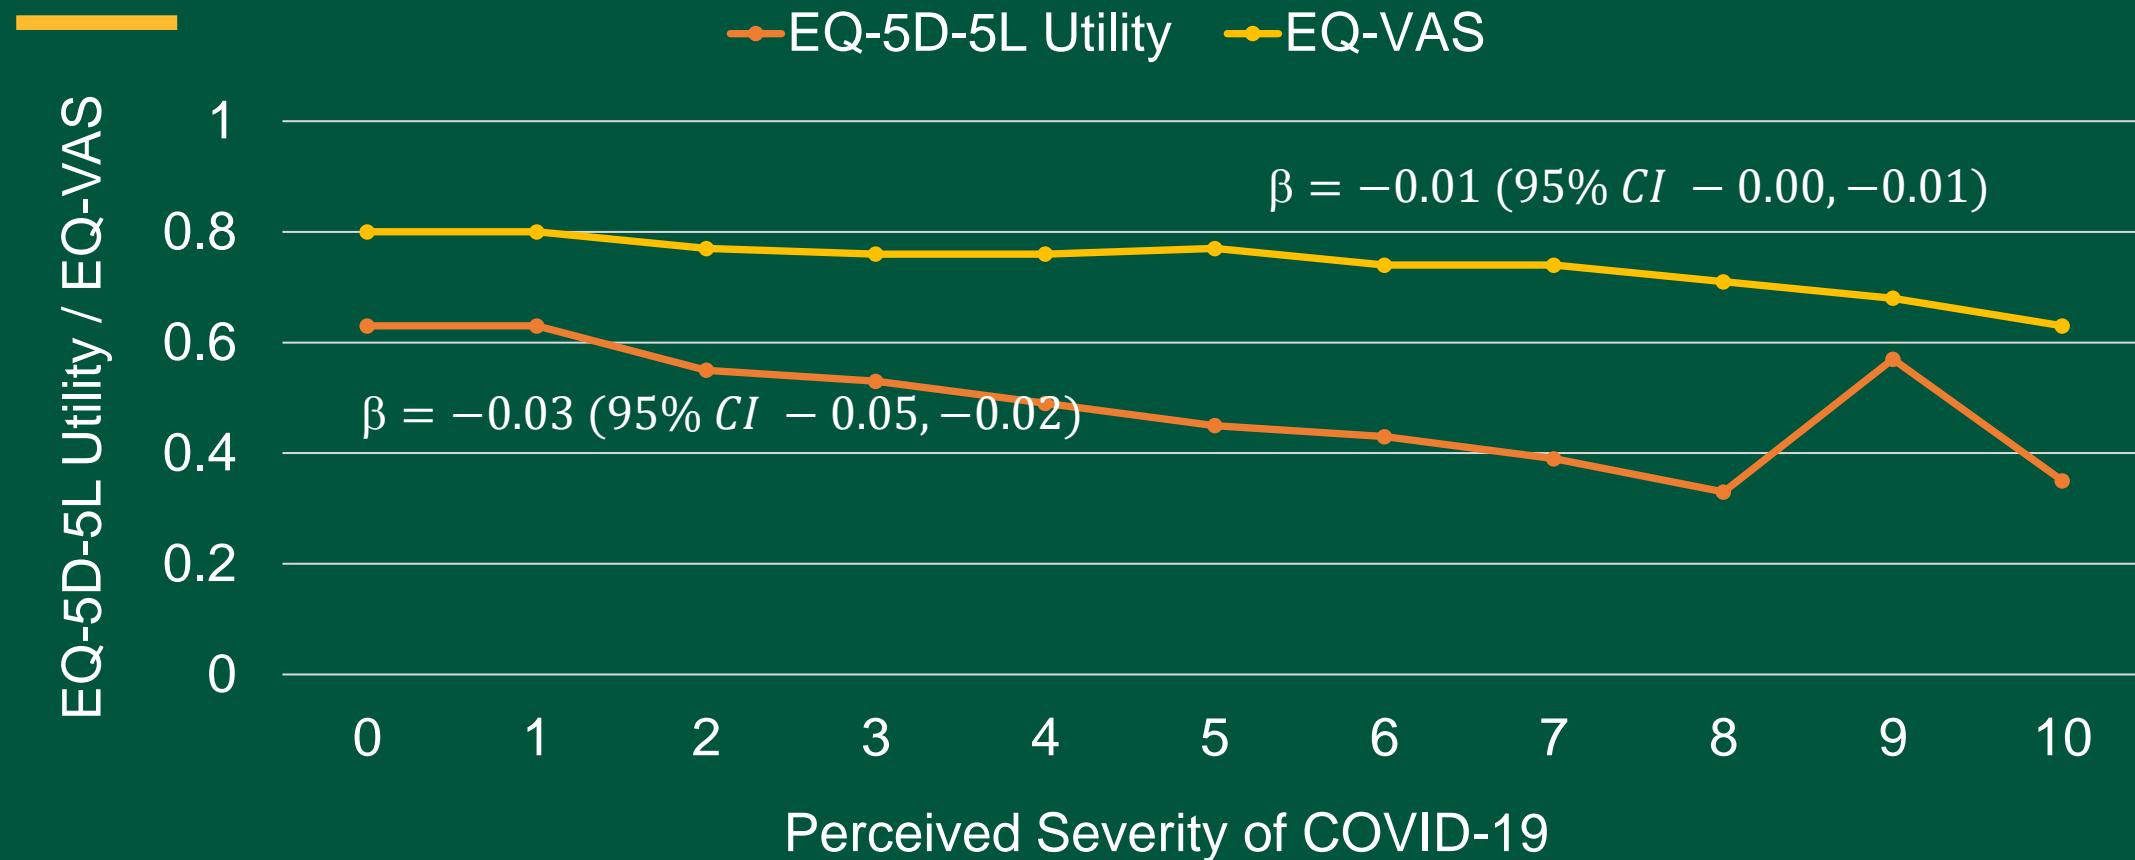

# EQ-5D-5L Measures

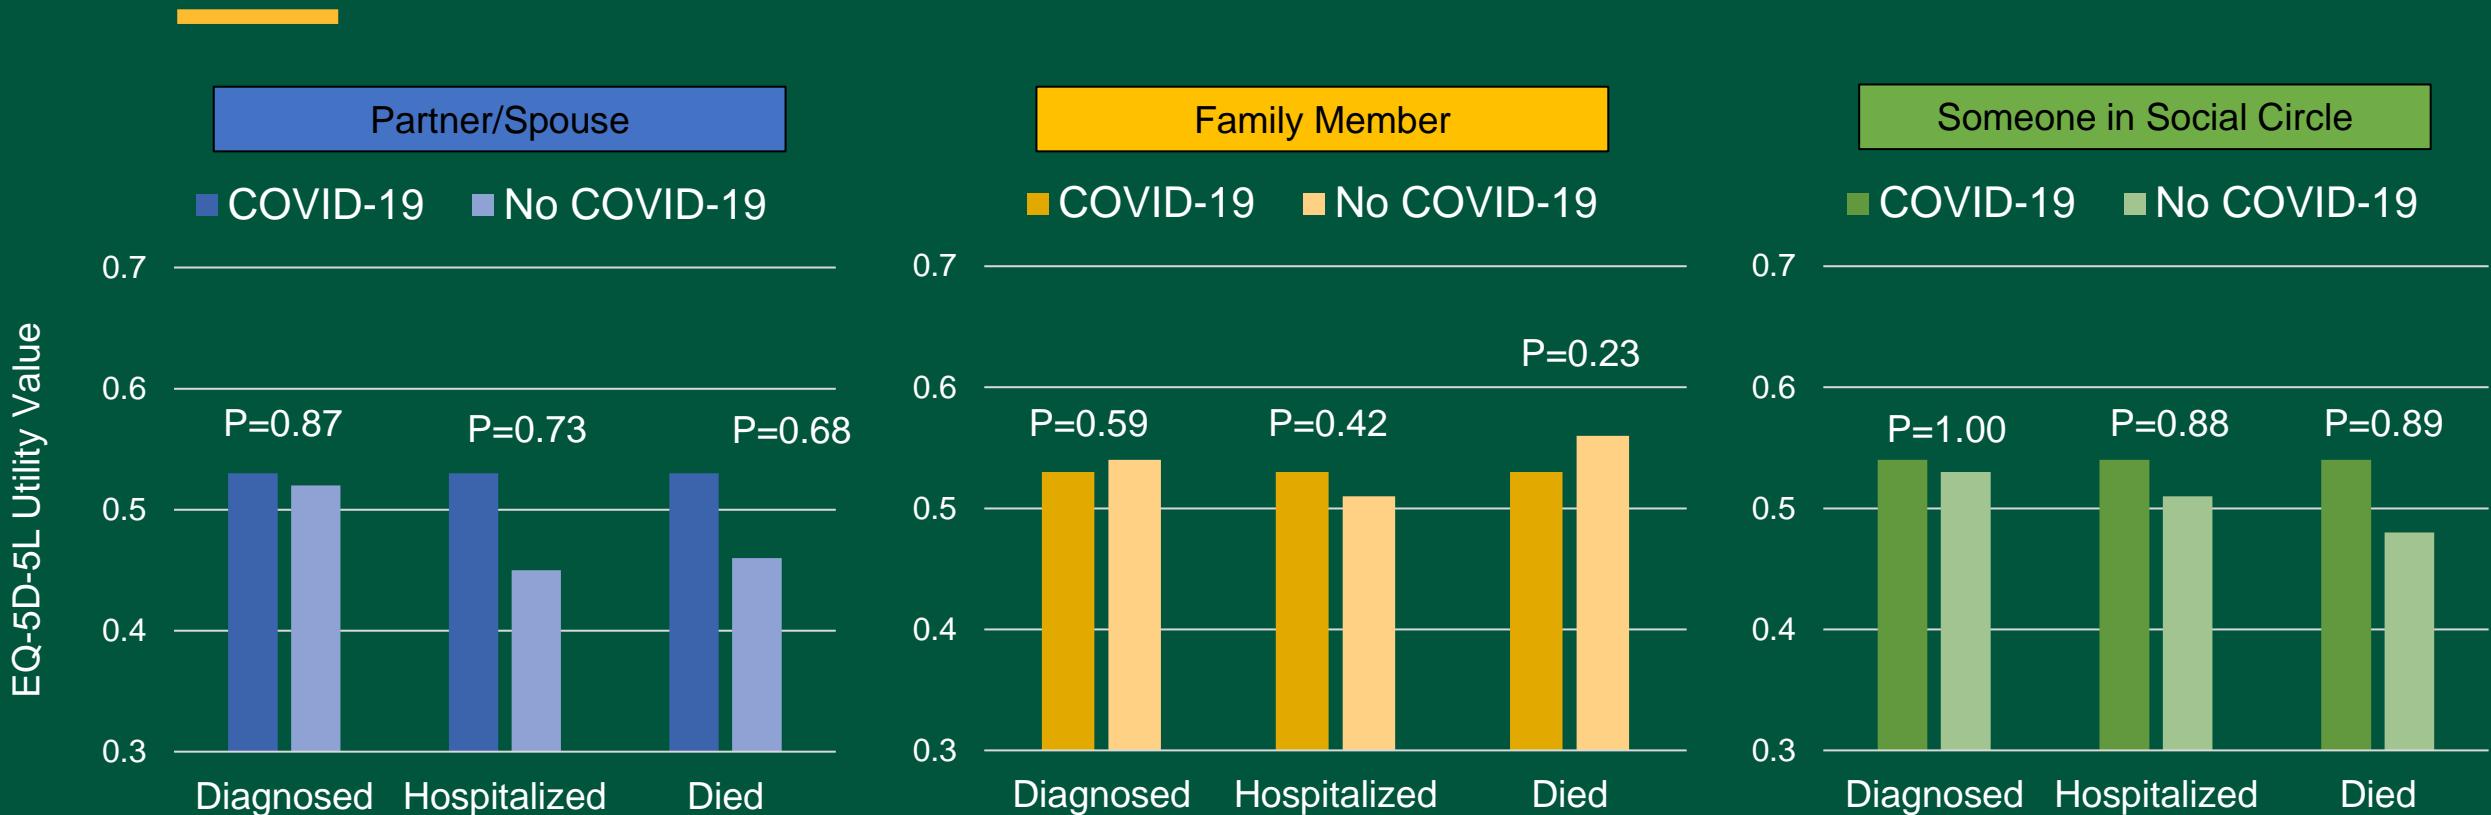

# HRQoL, by Experiences

# HRQoL, by COVID-19 Severity

# HRQoL, by Experiences with COVID-19

# Summary

---

- ✓ One-third of pregnant persons were directly affected by the pandemic through COVID-19 infection
- ✓ Most pregnant persons knew someone in their social circle with COVID-19 and 11% knew someone who died from COVID-19
- ✓ 16% of respondent's partner/spouse had COVID-19 and 1% died of COVID-19
- ✓ Pregnant persons scored highest on anxiety and depression measure of the EQ-5D-5L

# Summary

---

- ✓ Lower EQ-5D-5L utility values associated with younger age, Asian race, being a homemaker or student, and diagnosis with asthma or hypertension
- ✓ Infection prior to pregnancy was associated with lower utility value
- ✓ For each unit increase in the perceived severity of COVID-19 illness, the EQ-5D-5L utility value decreased by 3%
- ✓ No associations were observed or family or social circle experiences with COVID-19 or for comparisons with EQ-5D-VAS scores.

# Future Directions

---

- HRQoL lower for pregnant persons directly impacted by the COVID-19 pandemic
- More research needed to evaluate causal pathways influencing HRQoL
- Better understanding of family-level effects
- Duration of any pandemic-associated HRQoL effects
