Introductory questions

- **What is artificial intelligence (AI)?**
 - AI is a field that leverages computers and machines to mimic the problem-solving and decision-making capabilities of the human mind [1]
- **How is AI used in existing industries?**
 - Inspire
 - Optimise
 - Support decision making
- **How can AI be utilised for health economic modelling?**

Write standardised Visual
Basic Analysis (VBA)
functions

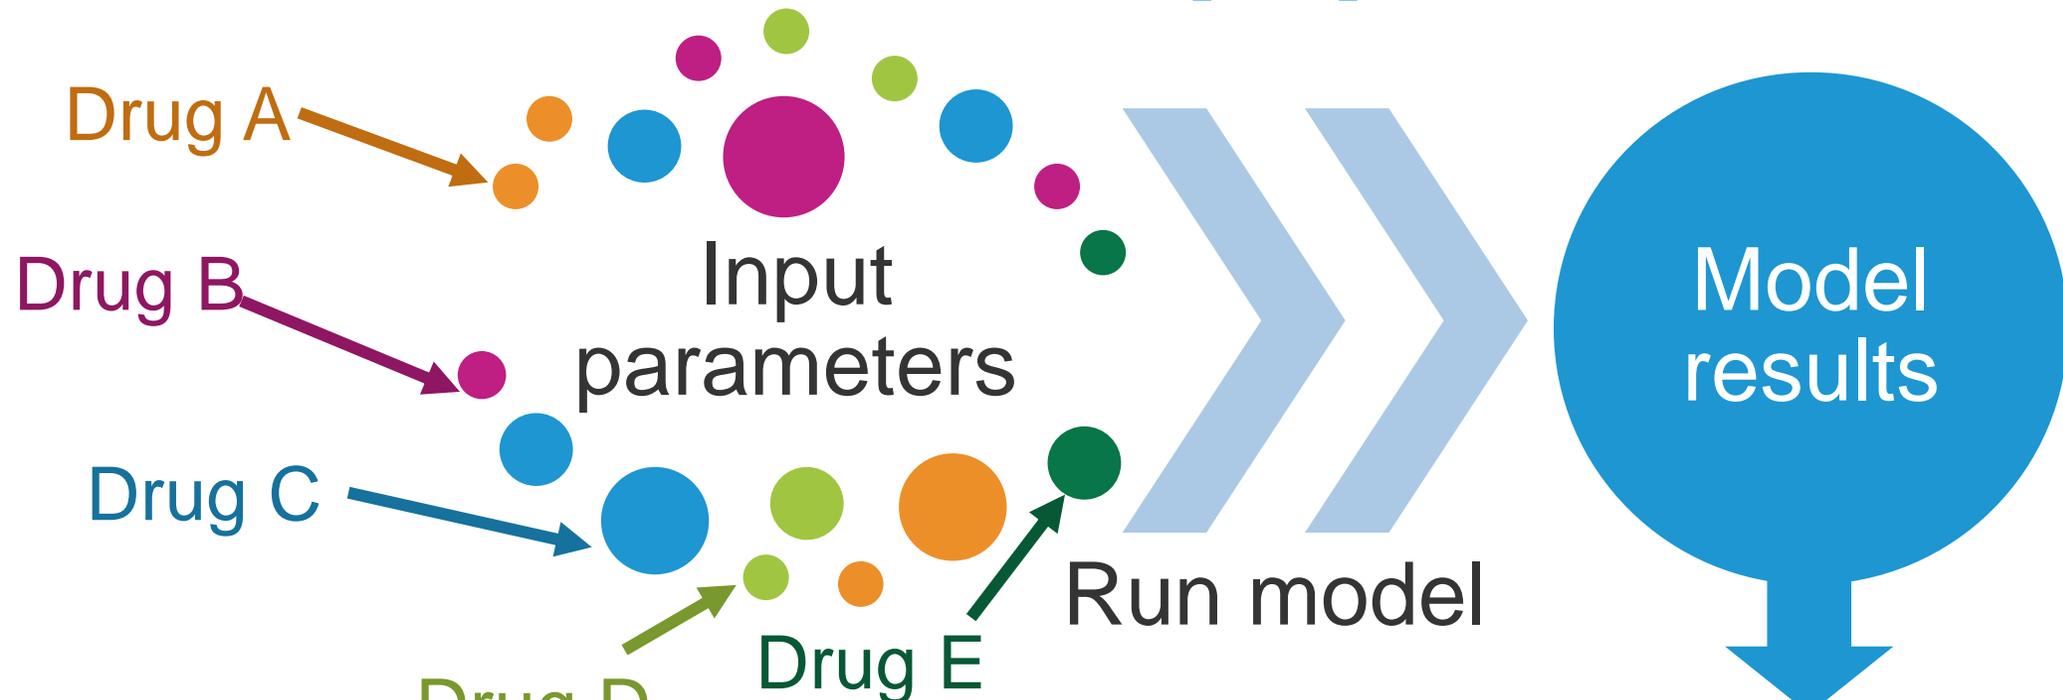

Optimise VBA code

A fully incremental analysis (FIA) is required for HTAs submitted to NICE [2, 3]

	Cost	Effectiveness
Drug A	£5,000	1
Drug B	£12,000	1.5
Drug C	£25,000	3
Drug D	£10,000	2
Drug E	£35,000	4

A fully incremental analysis (FIA) is required for HTAs submitted to NICE [2, 3]

	Cost	Effectiveness
Drug E	£35,000	4
Drug C	£25,000	3
Drug D	£10,000	2
Drug B	£12,000	1.5
Drug A	£5,000	1

FIA, fully incremental analysis; HTA, health technology assessment, ICER, incremental cost-effectiveness ratio; NICE, National Institute for Health and Care Excellence; QALYs, quality adjusted life years.

A fully incremental analysis (FIA) is required for HTAs submitted to NICE [2, 3]

	Cost	Effectiveness
Drug E	£35,000	4
Drug C	£25,000	3
Drug D	£10,000	2
Drug B	£12,000	1.5
Drug A	£5,000	1

Dominated →

FIA, fully incremental analysis; HTA, health technology assessment, ICER, incremental cost-effectiveness ratio; NICE, National Institute for Health and Care Excellence; QALYs, quality adjusted life years.

A fully incremental analysis (FIA) is required for HTAs submitted to NICE [2, 3]

	Cost	Effectiveness	ICER
Drug E	£35,000	4	£10,000 per QALY
Drug C	£25,000	3	£15,000 per QALY
Drug D	£10,000	2	£5,000 per QALY
Drug A	£5,000	1	-

FIA, fully incremental analysis; HTA, health technology assessment, ICER, incremental cost-effectiveness ratio; NICE, National Institute for Health and Care Excellence; QALYs, quality adjusted life years.

A fully incremental analysis (FIA) is required for HTAs submitted to NICE [2, 3]

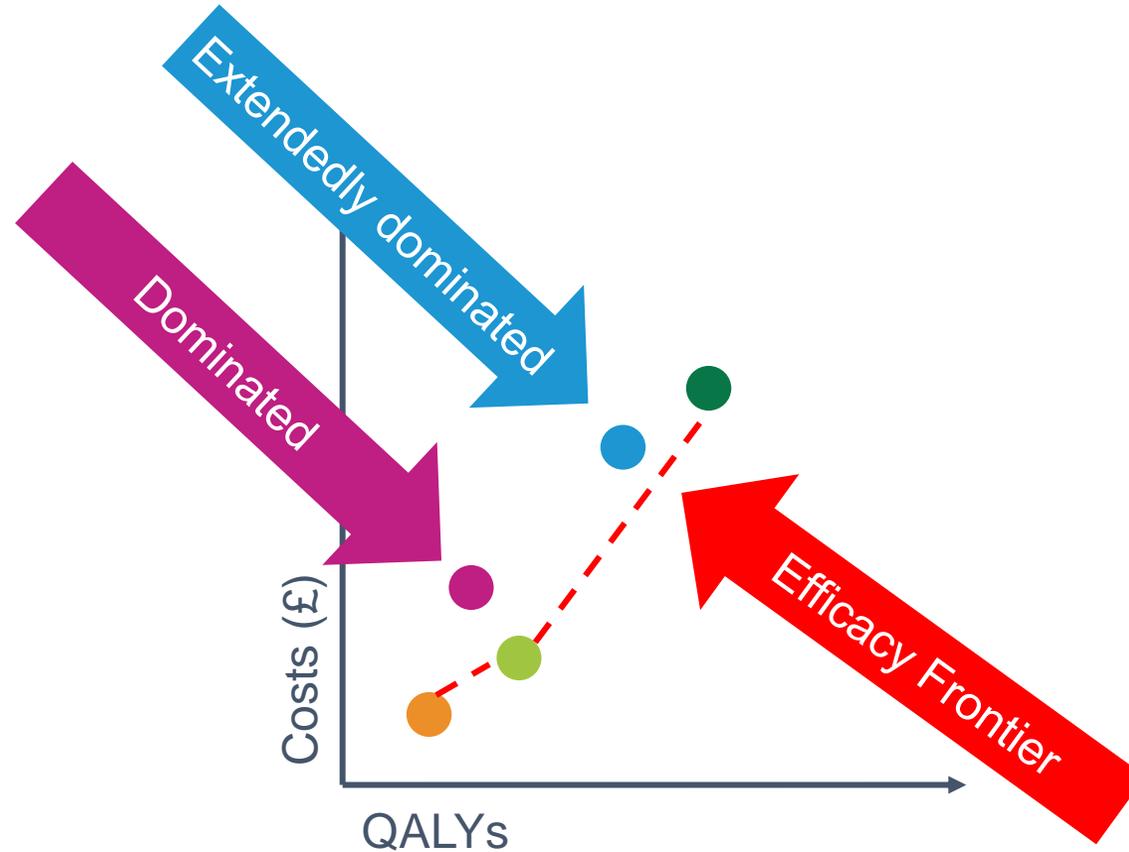

Extendedly dominated

	Cost	Effectiveness	ICER
Drug E	£35,000	4	£10,000 per QALY
Drug C	£25,000	3	£15,000 per QALY
Drug D	£10,000	2	£5,000 per QALY
Drug A	£5,000	1	-

FIA, fully incremental analysis; HTA, health technology assessment, ICER, incremental cost-effectiveness ratio; NICE, National Institute for Health and Care Excellence; QALYs, quality adjusted life years.

The dominance / extended dominance results can be plotted on an efficacy frontier

An FIA can be timely to build in an excel-based model

R based models?

- Using the 'dampack' package [4]

```
calculate_icers Calculate incremental cost-effectiveness ratios (ICERs)
```

Description

This function takes in strategies and their associated cost and effect, assigns them one of three statuses (non-dominated, extended dominated, or dominated), and calculates the incremental cost-effectiveness ratios for the non-dominated strategies

The cost-effectiveness frontier can be visualized with `plot`, which calls `plot.icers`.

An efficient way to get from a probabilistic sensitivity analysis to an ICER table is by using `summary` on the PSA object and then using its columns as inputs to `calculate_icers`.

Usage

```
calculate_icers(cost, effect, strategies)
```

Arguments

`cost` vector of cost for each strategy

`effect` vector of effect for each strategy

`strategies` string vector of strategy names. With the default (NULL), there is no reference strategy, and the strategies are ranked in ascending order of cost.

Value

A data frame and `icers` object of strategies and their associated status, incremental cost, incremental effect, and ICER.

See Also

[plot.icers](#)

Examples

```
## Base Case
# if you have a base case analysis, can use calculate_icers on that
data(hund_strat)
hund_icers <- calculate_icers(hund_strat$Cost,
                             hund_strat$QALYs,
                             hund_strat$Strategy)

plot(hund_icers)
# we have so many strategies that we may just want to plot the frontier
plot(hund_icers, plot_frontier_only = TRUE)
# see ?plot.icers for more options
```

Excel based models?

- No open-source standardised functions available.
- Timely and tricky to implement, especially when using formulas within cells.

Can AI help to...

- Write a bespoke VBA function to automate an FIA?
- Review and optimise an existing bespoke VBA function to automate an FIA?

First, we explored whether AI could write a bespoke VBA function for an automated FIA

ASK AI

- An AI was asked to write a VBA function to automate an FIA.
- The function was reviewed.

REPLICATE

- Feedback was provided and new code was generated.

MODEL

- Functions adapted for an example model.
- Cross checked results using the 'dampack' package in R

Second, we explored whether AI could review and optimise an existing VBA function for an automated FIA

WRITE

- A modeller wrote a bespoke VBA function to automate an FIA.

ASK AI

- AI was asked to review and provide advice on how the function could be optimised.

REVIEW

- Reviewed comments from the AI and any changes made to the code.
- Cross checked results using the 'dampack' package in R.

When asked an appropriate research question, the AI generated the FIA function

POSITIVES

FULLY COMMENTED VBA CODE WAS WRITTEN IN UNDER **2 MINUTES**

- Iteration 1: 42 seconds
- Iteration 2: Instant after feedback
- Iteration 3: 1 minute, 25 seconds

2 ITERATIONS CORRECTLY CALCULATED THE DOMINANCE OUTCOMES

LISTENED TO FEEDBACK

MINOR ISSUES

ALL ITERATIONS CONTAINED MINOR ISSUES INCLUDING:

- Use of hardcoded values
- Missing arguments
- Use of key words not used in VBA
- Inefficient code
- Outputting results in an incorrect format

THESE ISSUES CAN EASILY BE IDENTIFIED AND ADDRESSED BY A MODELLER PROFICIENT IN VBA

MAJOR ISSUES

EXTENDED DOMINANCE CALCULATIONS INCORRECT IN ALL 3 ITERATIONS

- Iteration 1 applied the principal of dominance twice.
- Iteration 2 assumed all non-dominant comparators were extendedly dominant
- Iteration 3 contained an error within an overly complex loop.

AI was asked to review and optimise a bespoke VBA function for FIA written by a modeller

POSITIVES

THE AI **CLEARLY EXPLAINED** HOW TO MAKE CODE MORE EFFICIENT AND IMPLEMENTED CHANGES QUICKLY

- Sorting algorithm updated to “quick sort” from “bubble sort”

REMOVED CODE THAT WAS NOT NEEDED

MINOR ISSUES

ADDITION OF VARIABLES NOT NEEDED:

- The AI redefined variables with different names
- Variables defined at random points in the code – this was messy
- Added unnecessary variables

MAJOR ISSUES

REMOVED AN INNER LOOP FOR “EFFICIENCY” CAUSING THE PRINCIPAL OF EXTENDED DOMINANCE TO BE **INCORRECTLY APPLIED.**

The results from each FIA function are presented in the table below

Intervention	Cost	QALY	FIA using 'dampack' in R	Iteration 1	Iteration 2	Iteration 3	Modeller's code	AI optimised code
Intervention A	£6,913	4.19	Dominated	Dominated	Dominated	N/A	Dominated	Extendedly dominated
Intervention B	£6,639	7.57	Not dominated	Not dominated	Extendedly dominated	N/A	Not dominated, ICER: £407	Not dominated, ICER: £407
Intervention C	£9,435	4.88	Dominated	Dominated	Dominated	N/A	Dominated	Dominated
Intervention D	£4,109	0.99	Not dominated	Not dominated	Extendedly dominated	N/A	Not dominated, Referent	Not dominated, Referent
Intervention E	£5,728	5.33	Not dominated	Not dominated	Extendedly dominated	N/A	Not dominated, ICER: £90	Not dominated, ICER: -£1041
Intervention F	£9,551	1.69	Dominated	Dominated	Dominated	N/A	Dominated	Extendedly Dominant
Intervention G	£9,553	2.16	Dominated	Dominated	Dominated	N/A	Dominated	Dominated
Intervention H	£5,457	2.31	Extendedly dominated	Not dominated	Extendedly dominated	N/A	Extendedly dominated	Not Dominant, ICER: -£6584

The Turing test: Which conclusion was written by a person, and which was written by an AI?

Our conclusion

Can AI write VBA code?

- AI can very quickly write fully commenting VBA code.

Should AI write VBA code?

- Lack of open-science VBA code from which the AI can learn
- Push towards being more open-science with models

Will modellers be replaced by AI?

- Its unlikely
- Instead, AI will be a tool to:
 - Save time
 - Inspire modellers
 - Optimise code

AI conclusion

Can AI write VBA code?

- AI can assist in writing VBA code by providing code suggestions and code generation tools.

Should AI write VBA code?

- It may not handle uncommon or highly specialized VBA tasks well.

Will modellers be replaced by AI?

- Human oversight and expertise are essential for ensuring:
 - Quality
 - Correctness

Thank you for listening
