#### Introduction

- The obesity epidemic is recognized by the Worl problem.
- The conditions are caused by excessive fat in the diseases, like cancer, diabetes, or heart disease, care spending.

## Purpose

 This study aimed to assess the current publish burden associated with obesity in low- and middl

# Methods

- A systematic review following the Preferred Reperts Meta-Analyses guidelines was performed.
- CINAHL, MEDLINE, PubMed, Web of Science an searched for studies published from inception to C
- Costs of illness for all included studies were conv using country-specific gross domestic product infla on purchasing power parities (PPP).
- Quality assessment of all included studies was performed using Newcastle-Ottawa quality assessment scale.

## ts

the total 676 studies identified, five studies reported prevalence-based estimate, four studies sed on survey and the remaining three studies presented model based.

nese studies published data from Brazil, Ghana, China, South Africa, Mexico, and Thailand. Out of 12 studies, three studies reported the indirect costs.

ethodological quality was deemed moderate.

e annual direct and indirect costs associated with obesity for a population in LMICs ranged from D 0.2 billion to USD 12.56 billion and USD 223 million to USD 227.5 million, respectively.

spitalisation was the main cost driver in five of the included studies.

erage length of stay (days) for obesity-related diseases in Brazil for men and women 7.9 and 6.8.

# usions

ere was a considerable clinical and economic burden of obesity on individuals and the healthcare tems and may require appropriate prevention and management strategies. wever, the included studies employ varied approaches and many of them have methodological ortcomings. Thus, future studies should consider adopting standardised cost of illness thodology.
