Presentation Development Guide

This document contains information, best practice tips, and resources to help you develop your presentation from start to finish.

DESIGNING A STRONG PRESENTATION

Start With the Audience in Mind
Design your presentation based on what the audience needs to know. Start by identifying what the audience needs to know, believe, and do. Select your content by asking yourself - what do I need to provide for participants to walk away with actionable learning. As you develop your presentation, prioritize and select content that is “need to know” versus “nice to know.”

Keep it Interactive
Learning is a process. First, participants need to acquire information through presentation or discovery. Next, they need to interpret information to determine how it applies to their work. Finally, participants begin the process to apply this new information.

Best Practice Tips! Provide opportunities for participants to process new information and reflect on it. Peer sharing and collaboration are effective tools in applying new concepts – aka leave time for Q&A!!

Provide Concise Content
It is suggested that you provide 3-5 retainable main points that participants will take away from your presentation. A concise presentation allows the participant to focus on key points and organize them in a way that’s sense. Work with the session moderator or discussion leader to ensure your presentation compliments other presentations within your sessions without overlapping.

Leave the audience inspired! Be sure to provide resources, tools, and experiences that will allow attendees to impact change or action when they return home. Don’t forget to rehearse your presentation to ensure you can deliver the content in the define time limit.

DEVELOPING YOUR SLIDE DECK
ISPOR requires that all presentations use PowerPoint (if presenting slides.) The following tips will help you develop a slide deck that compliments your presentation and clearly displays your information.

Note: ISPOR does not provide a PowerPoint template. You are welcome to use your institution’s template or create one using the resources and tips provided below.

Control the Content
PowerPoint slides help augment your verbal presentation. They are meant to be visual representations of information and data that can be reviewed quickly and clearly. These slides help improve cognition by using text and graphics to highlight the main points and themes of your presentation. It is important to keep the audience focused on what you are saying. Slides with heavy text can often distract participants
as they read your slides while listening to you talk. When developing your slide deck, keep the following in mind:

- Limit text on slides and augment your narrative with photos, graphics, and diagrams.
- Create slides that reinforce your words, not repeat them.
- Ensure the slide content is grouped conceptually and flows through your narrative.

**Keep It Simple**
Less is more! Slides should be quick and easy to read, even from the back of the room! Follow these best practice tips to create your slide deck.

**Format**
- 16:9 widescreen format is required for all presentations
- First slide: provide your presentation title, name, and affiliation
- Second slide: provide your conflict-of-interest statement
- Last slide: include your contact information so that attendees may reach out should they have additional questions

**Text and Graphics**
- Use easy-to-read fonts such as Arial, Calibri, or Times New Roman
- Use the same font throughout the presentation
- Use bullet points only – not full sentences
- When applicable, use graphics instead of text
- Use high-quality graphics and animations; avoid clip

**Background**
- Slides should have plenty of white or negative space
- Always have high contrast between colors (e.g., background and text)
- A white background with dark text is the best way to maintain visual intensity
- Avoid unusual colors and busy backgrounds

**Video and Audio Files**
- Please see this article for file formats supported within PowerPoint.
- Consider compressing your videos. If you’ve authored your PowerPoint as a PPTX, there are tools within PowerPoint to do this automatically. Instructions are found here.
- If you will be converting or authoring videos, we recommend H.264 encoding at less than a 5Mbps bitrate for best performance. Typical resolutions in the meeting room will be 1024x768 for 4:3 presentations and 1280x720 for 16:9 presentations. A 1080p, maximum bit rate encoding will bloat the size of your presentation with no visual improvement and may hurt performance.
PRESENTING IN-PERSON
The meeting room will be equipped with a projector with a screen, laptop at the podium, slide advancer, speaker timer, head table with seating for (4) on stage with microphones, and a podium with a microphone.

Important!
- Speakers are unable to present using presenter view and are encouraged to print any notes prior to their presentation.
- Speakers will only have access to their PowerPoint presentation and cannot access the internet or other software.
- There will not be a dedicated AV technician in the session room. Speakers will be able to alert AV technicians that assistance is needed from the podium laptop. ISPOR staff will also be floating around the session rooms to assist with any speaker needs.

Speakers will be required to submit their slide deck prior to the conference. PowerPoint presentations will be uploaded to the meeting room computer prior to your presentation. Presentations cannot be uploaded or modified in the meeting room.

A Speaker Ready Room will be available on-site for you to view your uploaded presentation and make any last-minute changes. Additional information and resources on presenting in-person will be available in the coming months.
