ISPOR, Glasgow
First Plenary Session
November, 6 2017
HTA and the Healthcare Delivery System

"After market entry, cancer drugs rarely show benefits on overall survival or quality of life in randomised trials"

"Immediate Breast Reconstruction was performed in 41% of patients with DCIS (hospital range 0-80%) and in 17% of patients with invasive BC (range 0-62%)"

"Significant variation was found in the use of active surveillance. Policies to achieve consistent and higher rates of active surveillance should receive priority"

"Surgeon practices vary widely even in the presence of high-level recommendations. It is unclear whether further evidence alone would lessen unwarranted practice variation"

Essential requirements

ECCO essential requirements for quality cancer care (ERQCC) are checklists and explanations of organisation and actions that are necessary to give high-quality care to patients who have a specific tumour type

Value-Based Healthcare Strategic Agenda

• Re-organize care around patient conditions, into Integrated Practice Units
• Measure Outcomes and Costs for Every Patient
• Move to Value-Based Reimbursement models, and eventually Bundled-Payments
• Integrate Multi-Site Care Delivery Systems
• Expand or Affiliate Across Geography
• Build an Enabling Information Technology Platform

ISPOR 20th Annual European Congress
First Plenary Session
Value-Based Healthcare - Concepts

VALUE = \[ \frac{\text{Set of outcomes that matter to patient’s condition}}{\text{Total cost of delivering those outcomes over the full cycle of care}} \]

- Value is the only goal that can unite the interests of system participants – triple win
- Improving value is the only real solution
- The question is how to design a healthcare delivery system that substantially improves patient value
