2

Federal Medical and Biological Agency (FMBA of Russia)

UNIQUE SISTEM:

- 76 medical organizations
- 58 sanitary and epidemiological centers
- 33 scientific organizations
- 11 health resorts & sanatoriums
- 6 blood service organizations
- 4 research & production centers

- The Agency has its own production base of pharmaceuticals and medical devices
- Special structure in the Agency is being set up for evaluation and setting up standards of innovative healthcare technologies, applying international approaches to the clinical and economic studies (2015)
- Technology assessment process is based on the Russia's current standard for HTA, which was developed by our team

3

Health innovative technology assessment in the Federal Medical Biological Agency (FMBA of Russia)

The evaluation is a three-step process:

1. The first step is formal evaluation of the documents submitted by the applicant.
2. The second step is assessment of the credibility of the available scientific results and feasibility studies, performed by means of formal database search. Results are exposed to a public discussion on the website.
3. The third step is the decision about application of innovative technology and about making it a standard.

Health innovative technology assessment in the Federal Medical Biological Agency (FMBA of Russia)

- It is aimed at innovative technologies
- The basic question – introduction into clinical practice
- Using the experience of the best international approaches, including - multi-criteria analysis

5

Health innovative technology assessment in the Federal Medical Biological Agency (FMBA of Russia)

Professional motivation
