Integrating Evidence-Based and Cost-Effective Complementary and Alternative Medicine (CAM) into the Health Care Systems in Asia

Tuesday, 06 September 2016

Time: 8:30AM-9:30AM

Contents

• Brief overview of CAM

• Growing needs for economic evaluation in Asian countries

• Introduction of the session & speakers
Brief overview of CAM

- Definition of CAM

CAM (WHO)
- The terms "complementary medicine" or "alternative medicine" are used interchangeably with traditional medicine in some countries. They refer to a broad set of health care practices that are not part of that country's own tradition and are not integrated into the dominant health care system.

Complementary Versus Alternative (NIH)
- If a non-mainstream practice is used together with conventional medicine, it's considered "complementary."
- If a non-mainstream practice is used in place of conventional medicine, it's considered "alternative."

Brief overview of CAM

■ Definition of Integrative Medicine

Integrative Medicine

• The use of integrative approaches to health and wellness has grown within care settings across the United States.

• NCCIH generally uses the term "complementary health approaches" when we discuss practices and products of non-mainstream origin. We use "integrative health" when we talk about incorporating complementary approaches into mainstream health care.

https://nccih.nih.gov/health/integrative-health

Brief overview of CAM

■ Degree of Integration

• Integrative system
  • Officially recognized and incorporated into all areas of health care provision

• Inclusive system
  • Recognize but has not yet fully integrated into all aspects of health care

• Tolerant system
  • Recognize but has not yet fully integrated into all aspects of health care
Growing needs for economic evaluation in Asian countries

- General guidelines in 2000
  - Harmonize the use of certain accepted and important terms in traditional medicine
  - Summarize key issues for developing methodologies for research and evaluation
  - Improve the quality and value of research in traditional medicine
  - Provide appropriate evaluation methods to facilitate the development of regulation and registration in traditional medicine.

Growing needs for economic evaluation in Asian countries

- WHO traditional medicine strategy 2002-2005
  - Implementation of the strategy will initially focus on the first two objectives.
  - Achieving the safety, efficacy and quality objective will provide the necessary foundation for achieving the access and rational use objectives.
Growing needs for economic evaluation in Asian countries

- Beijing Declaration Adopted by the WHO Congress 2008

I. The knowledge of traditional medicine, treatments and practices should be respected, preserved, promoted and communicated widely and appropriately based on the circumstances in each country.

II. Governments have a responsibility for the health of their people and should formulate national policies, regulations and standards, as part of comprehensive national health systems to ensure appropriate, safe and effective use of traditional medicine.

III. Recognizing the progress of many governments to date in integrating traditional medicine into their national health systems, we call on those who have not yet done so to take action.

IV. Traditional medicine should be further developed based on research and innovation in line with the "Global strategy and plan of action on public health, innovation and intellectual property" adopted at the Sixty-first World Health Assembly in resolution WHA61.21 in 2008. Governments, international organizations and other stakeholders should collaborate in implementing the global strategy and plan of action.

V. Governments should establish systems for the qualification, accreditation or licensing of traditional medicine practitioners. Traditional medicine practitioners should upgrade their knowledge and skills based on national requirements.

VI. The communication between conventional and traditional medicine providers should be strengthened and appropriate training programmes be established for health professionals, medical students and relevant researchers.

Growing needs for economic evaluation in Asian countries

- WHO traditional medicine strategy 2014-2023

1. build the knowledge base that will allow T&CM to be managed actively through appropriate national policies that understand and recognize the role and potential of T&CM.

2. strengthen the quality assurance, safety, proper use and effectiveness of T&CM by regulating products, practices and practitioners through T&CM education and training, skills development, services and therapies.

3. promote universal health coverage by integrating T&CM services into health service delivery and self-health care by capitalizing on their potential contribution to improve health services and health outcomes, and by ensuring users are able to make informed choices about self-health care.
Growing needs for economic evaluation in Asian countries

WHO Global Atlas of Traditional, Complementary and Alternative Medicine

Brief Introduction: ISPOR Asia Consortium Complementary and Alternative Medicine (CAM) Working Group

• Established in May 2015
• Objective: Provide a platform for CAM professionals to exchange information, discuss issues, and propose solutions in the effort of an efficient, safe, rational and cost-effective use of CAM therapies in Asia
• Goal: Promote safety, efficacy and quality of CAM, facilitate the integration of evidence-based & value-based CAM into conventional practices for optimal healthcare in Asia
• Recent activities: presented at the ISPOR HTA Roundtables in Astana last year and in Singapore this year, and organized the first ISPOR CAM forum at the 7th Asia-Pacific Conference.
Introduction of the session & speakers

- **Ming Hu, PhD**, Professor and Director, Pharmaceutical Policy & Pharmaceutomics Research Center, West China School of Pharmacy, Sichuan University, Chengdu, China
- **Hwee Ling Koh, PhD**, Associate Professor, Department of Pharmacy, National University of Singapore, Singapore
- **Wendy Wong, PhD, BCM, BSc(Hons)**, Assistant Professor of Hong Kong Institute of Integrative Medicine, Assistant Professor of School of Chinese Medicine, and Deputy Chief Chinese Medicine Practitioner, Integrative Medical Centre, Faculty of Medicine, The Chinese University of Hong Kong, Hong Kong, China
- **Donghyo Lee, DKM, PhD**, Assistant Professor, Woosuk University College of Korean Medicine, Department of Ophthalmology & Otolaryngology & Dermatology, Woosuk University Korean Medicine Hospital, Jeonju, South Korea
